

Terrence Gillespie

Principal Design Engineer / Brisbane

Dear Wallet & Apple Pay Design Team,

I design payments experiences on Apple platforms. As Principal Design Engineer at Westpac, one of Australia's four major banks, I lead native design systems and component libraries across iOS and Android. Bringing that work to Wallet & Apple Pay is the role I've been working toward.

My path here is direct. I ran my own design studio in Sydney, then led mobile UX at Telstra, Australia's largest telco, then trained at the Apple Developer Academy in Naples to deepen my platform craft. Today I both design and ship: tokens, components, motion, and interaction patterns that engineers build against. I prototype in SwiftUI, review code with our iOS team, and treat handoff as a design problem in itself. Recent work includes SafeCall and SafeBlock, scam prevention features that protect customers at the moment they pay, and leading the design integration of a personal finance app Westpac acquired. The Westpac app has been rated best in class by Forrester three years running.

Typography is my passion. I graduated from TypeParis last year with distinction and released a typeface, Airlie. That attention to craft and detail carries into my UI work: consistency, colour, rhythm, scale and intent.

Payments design carries a duty of care. I focus on financial literacy, the pause points that protect people from costly mistakes, and accessibility built in rather than bolted on. Wallet & Apple Pay reaches billions, and I'd bring that same duty to every decision. My portfolio is at terrygillespie.com/product-designer.

I'm based in Brisbane and ready to relocate to Cupertino for this role. Thank you for considering me.
